

Project Overview

Build a functional scheduling system for academic staff to assign students to courses for an upcoming semester. A sample list of students and courses is provided.

Time Budget

~ 4 hours or less

Scenario

You are building a tool for **registrars and academic advisors** who need to:

- View a list of students and their academic progress
- See available courses for the semester
- Assign students to available courses for the upcoming semester
- Validate that assignments meet eligibility requirements

What to Build

A working web application with:

1. **Student List View** - Display students with their current academic status (year level, completed courses, current credit load)
2. **Course Catalog** - Display available courses with filtering (by department, instructor, available seats, etc.)
3. **Assignment Interface** - Allow staff to assign students to eligible courses with visual feedback
4. **Validation Logic** – Consider eligibility requirements defined in the sample data’s model.

Technical Requirements

Preferred (when having prior Blazor experience)

- .NET 8+ (Blazor Server OR WebAssembly - your choice)
- Runnable with **dotnet run** on a clean machine

Alternate (if no prior Blazor experience)

- Comparable web-framework of your choice

Deliverables

- **Working Code** - GitHub repo or ZIP
